Workshop  
Bangkok  
27-29 June 2007

## Introduction to Eagle Server

# Eagle Server Introduction

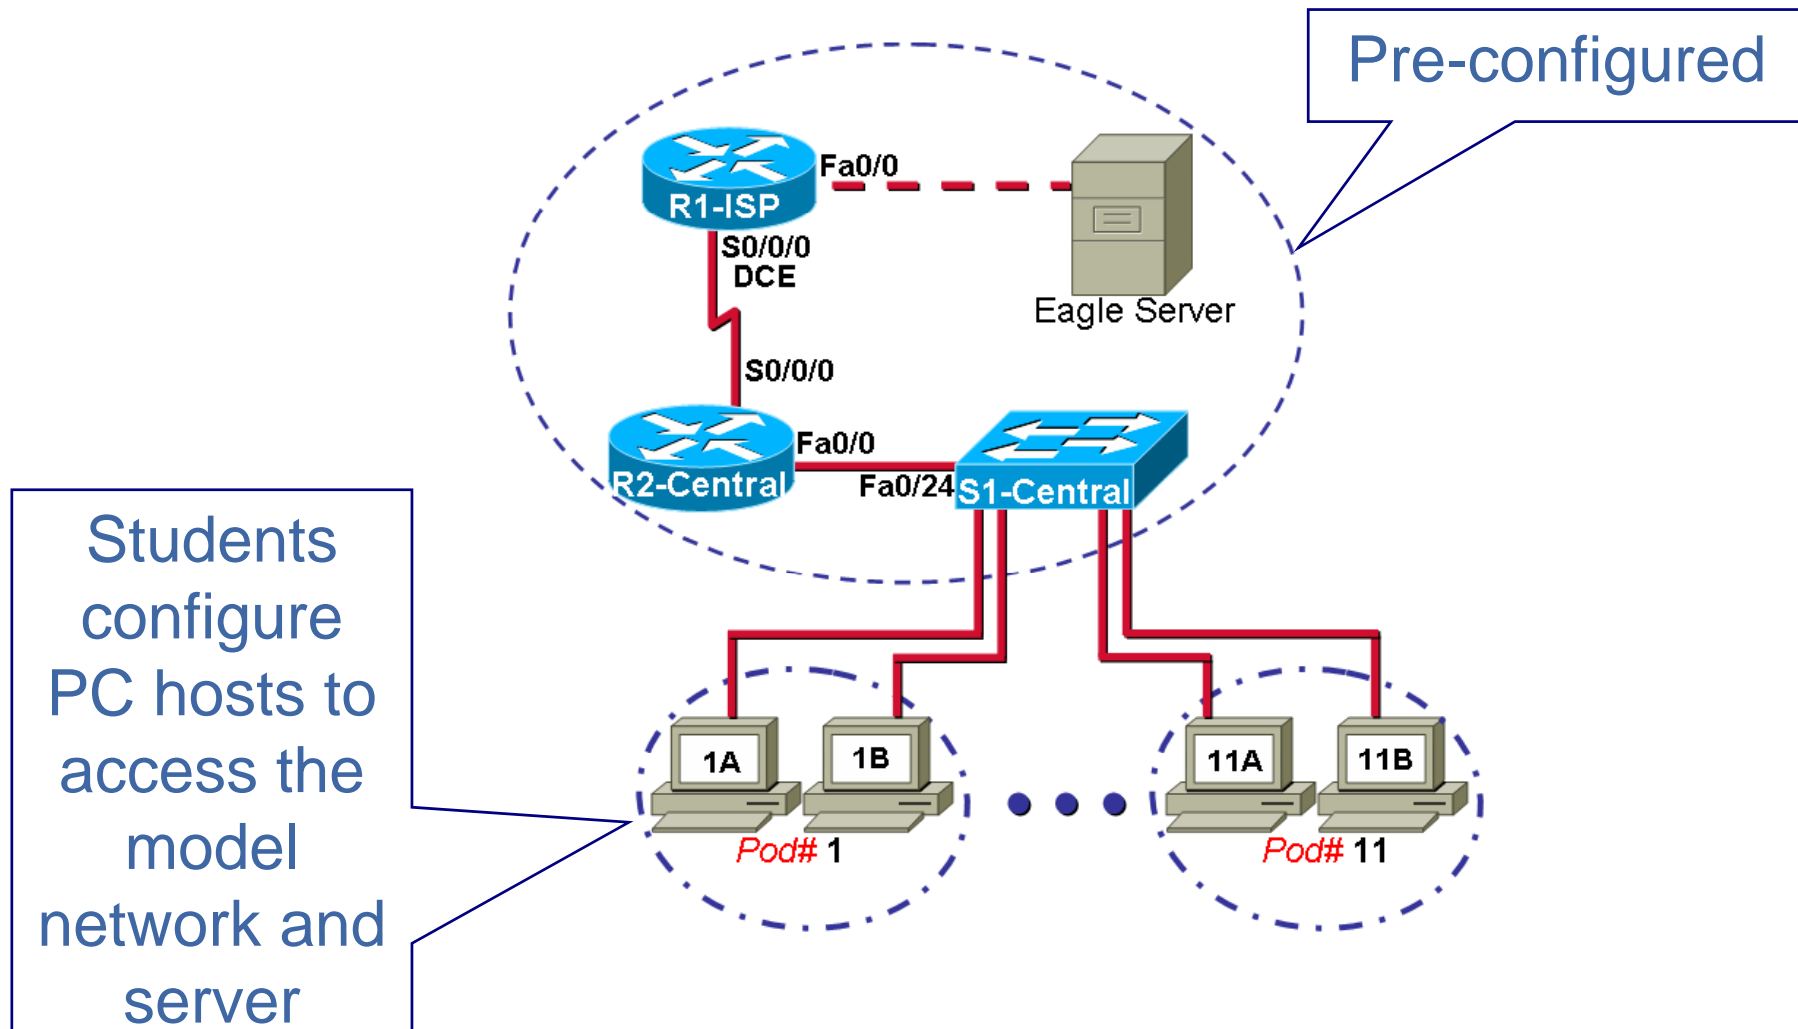

- Concept & Overview
- Installation Options & Process
- Services & Software
- Documentation
- Labs

# Eagle Server Concept

Students can access and use applications and services in the Lab as if on the Internet

# Eagle Server Topology

# Overview

Top-down approach in Exploration Network Fundamentals presents students with the opportunity to experience the setting up and implementing of Application layer services in a network lab environment.

A key part of the e-Doing in Exploration Network Fundamentals is basing Chapter 1 to 9 hands-on labs on a model Internet that uses a local server to provide a range of network services and applications that students can experience in the lab environment

# Where to get Eagle Server

Eagle Server is available to Cisco Networking Academies from Tools on Academy Connection.

This is a downloadable an ISO image that is then written to a CD-ROM as an image (not data).

# Four Options

1. Bootable CD-ROM downloadable as an ISO image
  - 1.1 Run from the CD
  - 1.2 Run as a permanently installed server on a PC
  
2. Downloadable VMware image
  - 2.3 Run from the image in RAM
  - In the future -*
  - 2.4 Run as a virtual server installed on a PC hard disk drive

# Option 1

## 1.1 Bootable CD-ROM (ISO) - Run from the CD

The CD contains a bootable Linux file system.

Runs network services directly from RAM on the PC on which it boots.

Very Flexible:

- PC lab resources can be shared with non-CCNA classes or courses.
- Any available PC meeting the specifications can temporarily act as the server for the duration of the class.

But:

- Any modifications made to the Server are lost when the computer is rebooted.

# Option 2

## 1.2 Permanent Server

The file system may be installed on a Linux or Windows FAT partition on the hard disk drive of a PC available to be permanently used as the server.

- A permanent installation enables any modifications made to the server to be retained when the computer is rebooted and re-used in later labs.
- Facilitates local server development and customization.
- Enables local backup copies of IOS images, configurations and class resources to be stored for future use.

But:

- Requires dedicated PC or partition on a PC hard drive.

# Option 3

## 2.1 Run from the saved VMware image

Compressed VMware image (RAR file) of server ISO

Downloaded and deployed using VMware.

Enables use of different lab and classroom computer resources that are available at different times.

The server runs as virtual server on a PC running VMware Player.

Very flexible, but:

- Requires VMware Player to be installed and running on PC
- Changes made to the server do not persist when the virtual server is restarted.

# Option 4

2.2 Run as a virtual server installed on a PC hard disk drive

## FUTURE OPTION UNDER DEVELOPMENT

Download compressed VMware image of Eagle Server Development Environment.

Note: The compressed file size is approximately 2.75GB, and includes two VMware hard disk drives.

Any changes to the server are retained when it is restarted.

But:

- Requires dedicated PC or partition on a PC hard drive.

# Eagle Server Minimum Requirements

- CPU: Minimum Pentium 3 or equivalent  
Pentium 4 or equivalent recommended
- RAM: Minimum 512 MB  
1 GB recommended
- HDD: Minimum 15 GB  
4 GB required to install Eagle-server on HDD.
- CD-ROM: Minimum 10x CD-ROM  
Minimum 30x CD-ROM to run from RAM
- NIC: 1
- OS: Minimum Microsoft Windows 2000

## Before Starting

1. Eagle Server supports only 1 network interface card, `eth0`.
  - Disable built-in wireless NICs in BIOS.
  - Cable only `eth0` if multiple wired NICs exist.
2. Power sequencing is important
  - Configure, at a minimum, router R1-ISP interface Fa0/0 with IP address 192.168.254.253, mask 255.255.255.0 and issue **no shutdown**.
  - Connect a crossover cable between R1-ISP Fa0/0 and the server NIC.
  - Power on the router first before starting Eagle Server.

## Eagle Server Setup: Running from CD

- Ensure PC is set to boot from the CD-ROM first. Change BIOS settings if necessary.
- Place the Eagle Server CD into the tray of the PC.
- Restart the PC.
- At the Exploration Server prompt, press **<ENTER>** to boot.
- After the drivers and settings are loaded, select option "1" to run the Linux software program from the CD and RAM.
- Eagle server software has a pre-configured IP address of 192.168.254.254.

## Eagle Server Setup: Dedicated Server

- Create and format a 4 GB FAT file system partition (not NTFS) on a MS Window PC hard drive.
- Reboot from the Eagle Server CD.
- At the opening screen press **<ENTER>** . This will load the Linux kernel.
- Type menu option **installonFAT**. Follow the instructions that are displayed. The installation will take approximately 15 minutes, depending on the speed of the CD.
- Leave the CD in the tray, required to access the server partition when the computer is rebooted.
- When the server is rebooted, press **<ENTER>** and type menu option **runondisk**.

# Eagle Server Setup: VMWare from Image

- Download and install the latest version of VMWare Player from URL:  
<http://www.vmware.com/download/player/>
- Download Eagle-Server-*version*.rar
- Open the file in Winrar or Winzip, and drag the Eagle-Server folder to the computer's desktop
- Double-click on folder Eagle-Server
- Double-click on the VMWare configuration file, Eagle\_Server.vmx

This will start Eagle Server inside VMWare.

Note: Changes will not be persistent because the VMWare image is in ISO format.

# Services Provided

- Domain Name Service
- HTTP Web Server
- Wiki & Web logs (blogging)
- Instant Messaging / IRC
- Email
- FTP
- TFTP
- SSH

# Eagle Server Name Service

Eagle Server primary network is 192.168.254.0 /24 on `eth0`

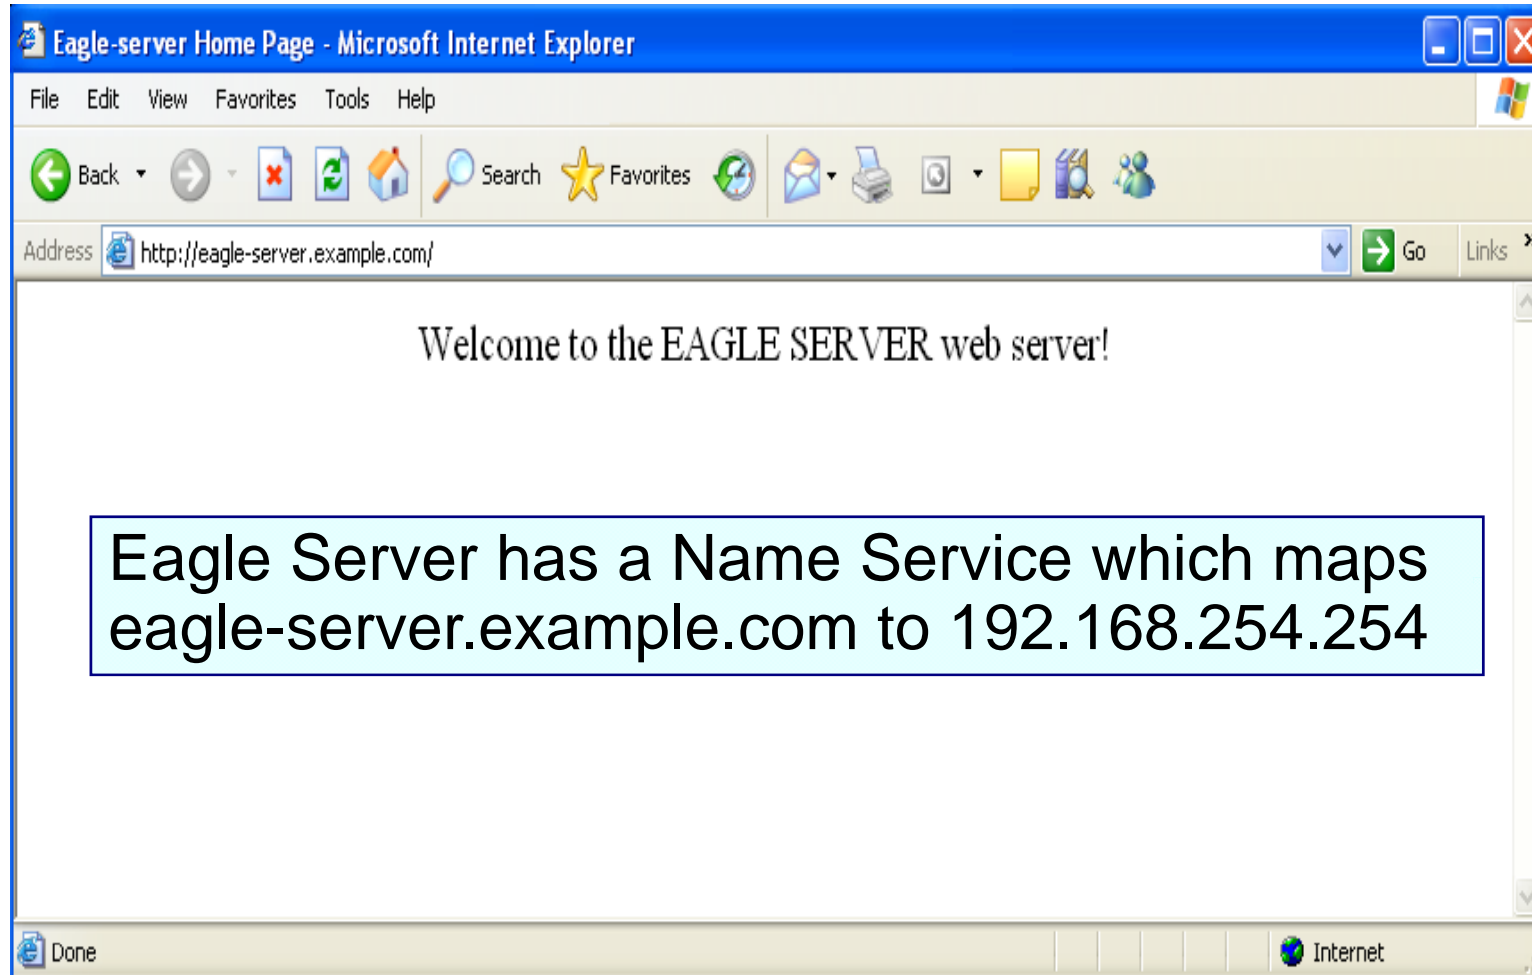

NAME	IP ADDRESS
<code>eagle-server.example.com</code>	<code>192.168.254.254</code>
<code>r1-isp</code>	<code>192.168.254.253</code>
<code>r2-central</code>	<code>172.16.255.254</code>
<code>s1-central</code>	<code>172.16.254.1</code>
<code>host1a-example.com</code>	<code>172.16.1.1*</code>
<code>host1b-example.com</code>	<code>172.16.1.2*</code>
<code>host2a-example.com</code>	<code>172.16.2.1*</code>
<code>host2b-example.com</code>	<code>172.16.2.2*</code>

*etc, to*

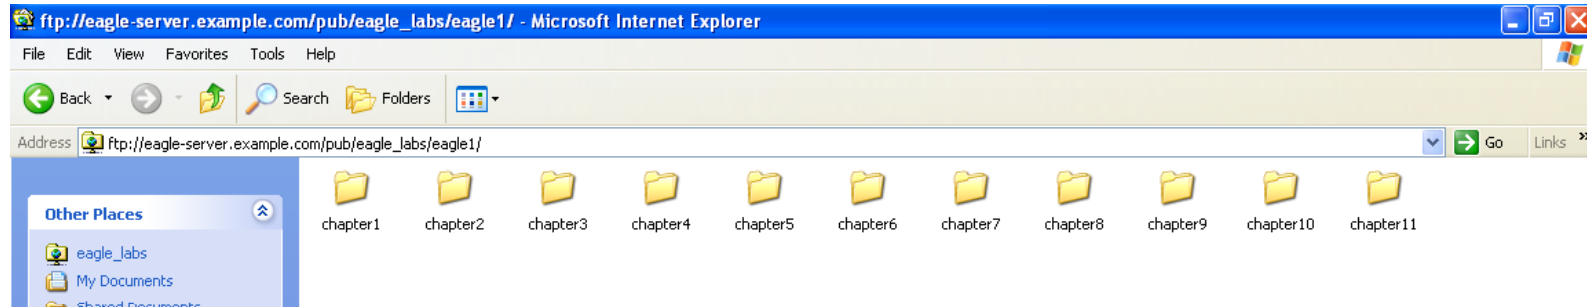

<code>host11b-example.com</code>	<code>172.16.11.2*</code>
----------------------------------	---------------------------

\* provided the student lab computer is configured for this IP Address

# Web Server Name Resolution

# Chapter FTP Resources

Eagle Server supports FTP access.

Instructors can put class files in `/var/ftp/pub/eagle_labs/` for student download.

Students can point a web browser at URL

`ftp://eagle-server.example.com/eagle_labs/eagle1/chapterX`  
and download material from the appropriate folder.

For example, folder `eagle1/chapter2` contains pcap files for Wireshark.

# TFTP & Configurations

Eagle Server is TFTP enabled.

- Instructors can use Eagle Server to backup IOS images or IOS configuration files for students to download to Cisco devices.
- As root, instructors can place files for TFTP transfer in `/tftpboot`
- Default device configurations include:
  - R1-ISP router connects to the Eagle server and has ip-name server configured to connect to allow access to the Eagle server via http.
  - R2-Central router has DHCP, DNS, usernames and passwords configured as well as privilege exec levels set for user access.
  - The S1-Central switch has usernames and passwords configured and privilege exec level settings.

# Access to Devices

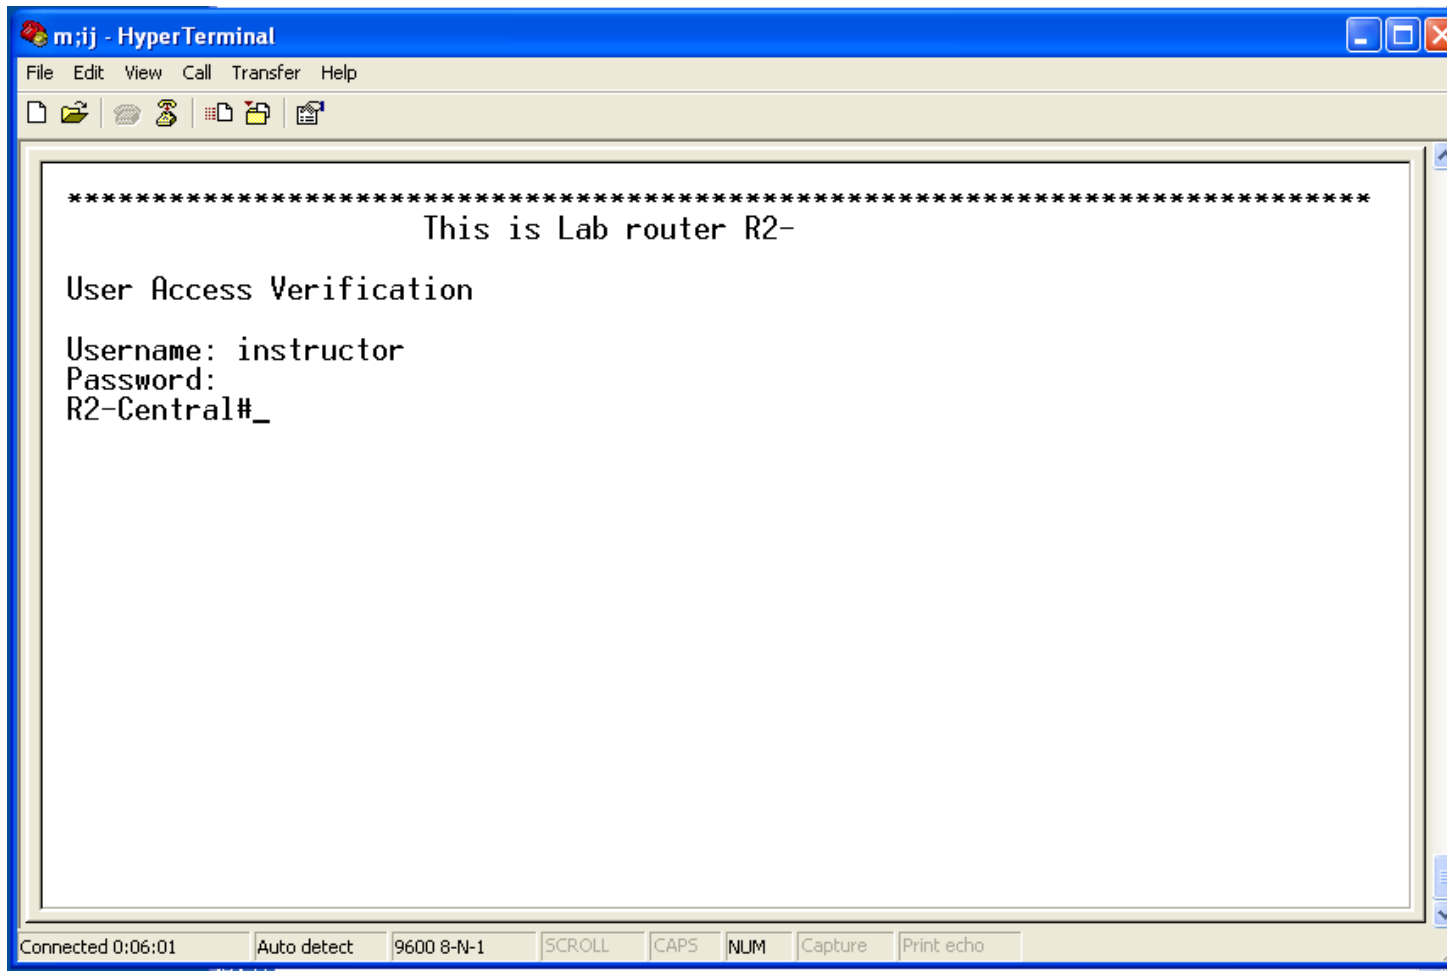

- Instructor access:

Console prompt on R2-Central will appear and ask for a username and password. Default settings are `instructor` and `cisco`. (You are encouraged to change the instructor password to prevent unauthorized access to the devices by students.)

- Student access:

Certain labs will direct students to telnet to the devices and access is granted using `ccna` (pod #) and password `cisco`. Privilege exec setting will limit the commands that they have access to.

# Instructor Device Login Screen

# Student Connection to Topology

```
C:\WINDOWS\system32\cmd.exe
Ethernet adapter Bluetooth Network Connection:
    Media State . . . . . : Media disconnected
Ethernet adapter Local Area Connection:
    Connection-specific DNS Suffix . :
    IP Address . . . . . : 0.0.0.0
    Subnet Mask . . . . . : 0.0.0.0
    Default Gateway . . . . . :
Ethernet adapter Wireless Network Connection:
    Media State . . . . . : Media disconnected
C:\Documents and Settings\John Rullan>ipconfig /renew
Windows IP Configuration

No operation can be performed on Bluetooth Network Connection while it has its media disconnected.
No operation can be performed on Wireless Network Connection while it has its media disconnected.

Ethernet adapter Bluetooth Network Connection:
    Media State . . . . . : Media disconnected
Ethernet adapter Local Area Connection:
    Connection-specific DNS Suffix . : example.com
    IP Address . . . . . : 172.16.0.1
    Subnet Mask . . . . . : 255.255.0.0
    Default Gateway . . . . . : 172.16.255.254
Ethernet adapter Wireless Network Connection:
    Media State . . . . . : Media disconnected
```

With DHCP enabled on the PC, at the command prompt students type `ipconfig /release`, then `ipconfig /renew` to pull an address from the R2-Central router.

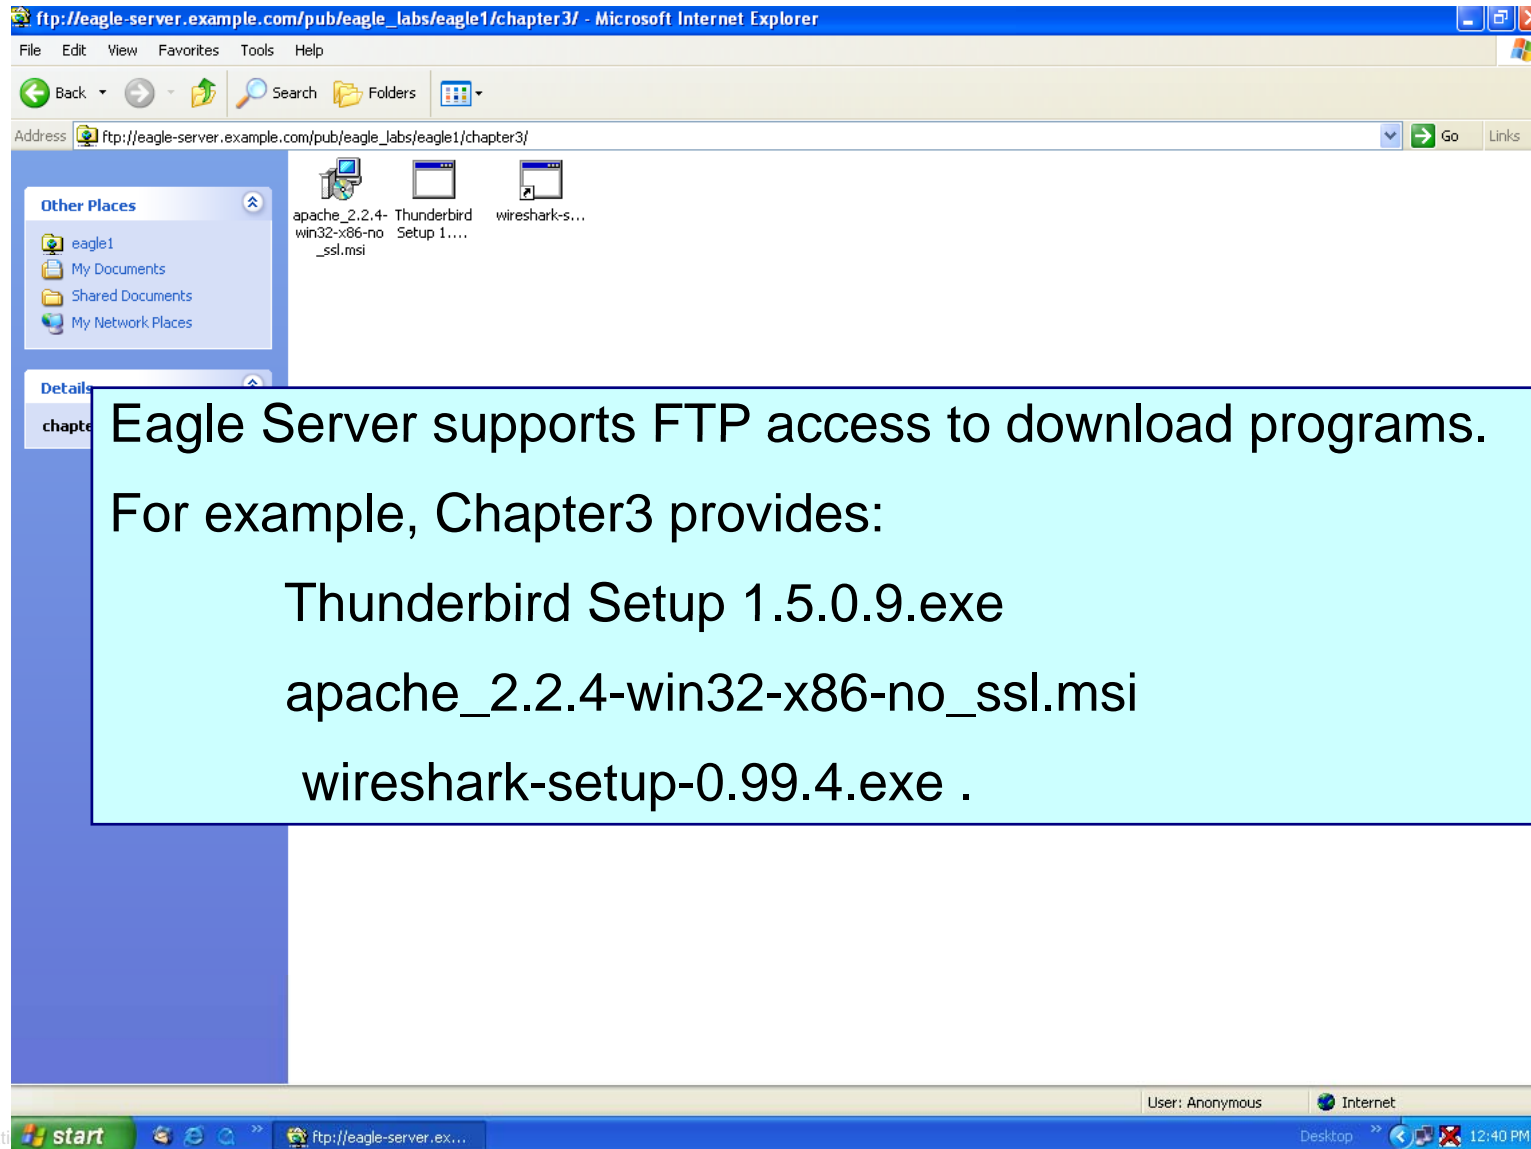

# Software Downloadable from Eagle Server

- Wireshark (formerly Ethereal)
- Apache Web Server
- TWiki
- Gaim
- Mozilla Thunderbird
- \*SolarWinds
- \*TeraTerm

\* Must be downloaded from Internet then uploaded to Eagle Server

# Chapter Downloadable Programs

Eagle Server supports FTP access to download programs.

For example, Chapter3 provides:

Thunderbird Setup 1.5.0.9.exe

apache\_2.2.4-win32-x86-no\_ssl.msi

wireshark-setup-0.99.4.exe .

# Wireshark

- Formerly known as Ethereal
- Packet sniffing software.
- Demonstrates TCP and UDP port numbers.
- Source and destination IP and MAC addresses.
- Displays FTP, HTTP, DNS, ICMP and ARP transactions.

# PING/ARP Captures

The image shows a Wireshark capture window titled "ARP-captures.pcap - Wireshark". The main pane displays a list of captured packets with the following details:

No.	Time	Source	Destination	Protocol	Info
1	0.000000	Intel_ac:a7:6a	Broadcast	ARP	Who has 172.16.255.254? Tell 172.16.1.1
2	0.000621	Cisco_cf:66:40	Intel_ac:a7:6a	ARP	172.16.255.254 is at 00:0c:85:cf:66:40
3	0.000627	172.16.1.1	172.16.255.254	ICMP Echo (ping) request	
4	0.001334	172.16.255.254	172.16.1.1	ICMP Echo (ping) reply	
5	10.901052	172.16.1.1	192.168.254.254	ICMP Echo (ping) request	
6	10.903549	192.168.254.254	172.16.1.1	ICMP Echo (ping) reply	

Below the packet list, the details pane shows the structure of the first frame:

- Frame 1 (42 bytes on wire, 42 bytes captured)
- Ethernet II, Src: Intel\_ac:a7:6a (00:16:76:ac:a7:6a), Dst: Broadcast (ff:ff:ff:ff:ff:ff)
- Address Resolution Protocol (request)

The packet bytes pane shows the raw data for the first frame:

```

# TWiki

The screenshot shows the TWiki Sandbox web page. At the top left is the TWiki logo with the text "collaborate with TWiki". To the right are "Jump" and "Search" input fields. Below the logo is a navigation bar with "Sandbox" and "Log In or Register" (the latter is circled in pink). A red box labeled "Log in Hyperlink" has an arrow pointing to the "Log In or Register" link. The main content area shows the breadcrumb "You are here: TWiki > Sandbox Web > WebHome" and the date "r12 - 14 Apr 2007 - 21:43:05 - TWikiGuest". The main heading is "Welcome to the CiscoStudentSandbox web". Below this is a paragraph: "The **sandbox** web is the sandbox you can use for testing. Everybody is welcome to add or delete some stuff. It is recommended to walk through the [TWikiTutorial](#) to get a jumpstart on the TWiki tool. A good rule of thumb is to add at the end of the page and sign and date it with your [WikiName](#)." A sidebar on the left contains links: "Sandbox Web", "Create New Topic", "Index", "Search", "Changes", "Notifications", and "Statistics". A login form is overlaid on the bottom right, titled "Please enter your username and password:". It has a "Username" field with "StudentCcna1" entered, a "Password" field with "\*\*\*\*\*" and a "Logon" button. A link "I forgot my password" is next to the password field.

## Wiki creation

## Ejecting Eagle Server CD

- Place mouse over the “K” at bottom left of desktop.
- Click on logout
- Another box will appear with the following choices:
  - End current session.
  - Turn off computer.
  - Restart computer.
- Select turn off computer and CD will eject from PC.
